Lifting capacity tables / Lifting height charts

- 1 OM marked with the asterisks (*) is a nominal one.
- 2 As for OMs more than 220t, the pulley on the boom frame and the hook also need to be modified. Please contact the manufacturer in advance if necessary.
- 3 The graphic description is as follows.

Graphical representation	Description
	Main Boom OM
	Superlift OM
	Jib OM
	Luffing Jib OM
	Wind plant Jib OM

R	Working radius

	Outriggers intermediately extended
	Over full range
	Weight of counterweight
	Slewing radius, counterweight
W_{max}	Max. wind speed, working time
L	Boom length

- 4 Do not lift a load that is above the capacity of the crane under any condition.
- 5 Do not perform the lifting operation when the wind speed exceeds the limit, especially for large boom length and large working radius OM.
- 6 A temperature difference occurs between the side facing the sun and the side facing away from the sun in cranes with telescopic booms. This causes that the boom frame material expands when heated and contracts when cooled, which can affect the straightness of the boom frame to some extent.
- 7 When lowering the load from high place (such as shield construction, wind plant maintenance etc.), first perform rope arrangement OM, and then use a hook of large weight (the counterweight plate is allowed.) and apply big reeving as possible as you can in order to reduce the working layers of the winch.
- 8 Select the proper hook and multiple rope fall during lifting operation. Reduce the working pulling force of single rope, and thus reduce the risk of wire rope damage.
